NOTE TO PATIENTS & ASSISTANTS

New Colors and Effects and Discontinued:

We have changed some items in our color and special effects catalog. This is the most recent version as of January 1, 2022, any preceding versions are to be replaced by this version to avoid confusion in choosing colors or special effects for your appliance.

Please Note:

Encourage those choosing stickers to be realistic in their expectations. If they have a mouth the size of "Godzilla" it will fit a lot of stickers and special effects. But usually mouths aren't large enough to have room, so encourage them to choose appropriate effects for not only the size of their upper appliance, but remind them that the lower appliance is always narrower and has less room. We recommend a second choice if possible to accommodate certain types of expansion devices.

We promise to do our best in making what you want, but reserve the privilege of making something that works. Please be aware that we may have to make alterations where necessary.

Colors and special effects can be mixed and matched. We have put together this chart to illustrate the many possibilities that we have created. If you find a special effect or color that you like, just ask and we will do our best to make it for you. You might even create a new one.

Care & Maintenance:

The life of your retainer depends on care of the appliance. If you follow a few simple rules your retainer will last a long time.

Retainer Do's

1. Several times a day, use a tooth brush to remove any particles of food or other debris that might be present and rinse off in luke warm water. Never use hot water.
2. If the retainer has plaque build up scrub it with luke warm water and soap. If it is cleaned regularly plaque should not happen.

Retainer Don'ts

1. Don't use chemicals like denture cleaners as they "eat" the metal parts of your appliance.
2. Don't expose them to heat of any kind, directly or indirectly.
3. Don't leave it in a window in the sun even if it is in it's case!
4. Don't remove your appliance by pulling on the center of the wire that goes across your front teeth. Always remove your appliance with equal finger pressure.
5. Don't leave it where the dog can get it.
6. Take care of this device so that it will last a long time and take care of the job both you and your dentist have done.

Thank You
